Hill International (NYSE:HIL) was founded nearly 40 years ago on the premise that the risk inherent in every capital project doesn’t need to impede its progress. Since then, we’ve helped thousands of clients reach new heights with capital projects by providing independent, highly customized services that manage risk and deliver results.

Today, Hill is regarded as the global leader in project management and construction claims consulting services. Key to Hill’s success is the caliber and commitment of our professionals—and the unmatched, industry-specific depth of their expertise in all types of airport projects—from feasibility studies, regulatory compliance management and security upgrades, to runway or terminal expansions, and construction of new, cutting-edge facilities that serve the increasingly sophisticated, rapidly growing air travel and air freight industries.

Our four decades of experience provides clients with an in-depth view of the specific risks that airport projects are likely to encounter. We understand the unique challenges and opportunities of today’s airport projects. We understand the intricacies and constraints of domestic and International funding, and ever-tightening budgets regardless of project location. We understand that each project is affected by both national and International trends and local concerns. We understand that each project requires a unique approach. We understand the traditional and alternative project delivery systems that work best for each type of project. We understand the constantly evolving challenges of complying with national—and now International—regulations. And, we understand the need for the airports industry—and its consultants—to stay on top of the latest trends, regulations and market demands.

Hill’s unique understanding of the industry is the direct result of its groundbreaking work. When the Philadelphia International Airport needed a program manager to bring its land- and air-side facilities in line with projected passenger and aircraft demand, they chose Hill International. When Phoenix Sky Harbor International Airport launched a massive expansion and improvement program to meet skyrocketing demand, they turned to Hill International. When Los Angeles World Airports needed an experienced project controls team to augment their staff and complete a multi-billion-dollar capital program, they called on Hill International. When Dubai International Airport, one of the busiest and fastest-growing in the world, needed to expand, they called in Hill International to help them meet the challenge.
Hill's 4,000 professionals throughout the world include program, project and construction managers, CPM schedulers, value engineers, estimators and cost engineers, inspectors, structural and process engineers, contract administrators and claims experts. Our project teams are put together to provide the best of both worlds—global, industry-wide expertise combined with knowledge of local conditions and processes. Our teams provide a comprehensive range of services that can be put to work in any phase of our clients' capital projects—from concept through completion.
