

David Quezada

Vice President, Advisory

Key Focus: Energy

David Quezada brings nearly 30 years of experience delivering complex capital programs across the electric utility and energy sectors. He specializes in initiating, structuring, operating, and improving major utility scale programs. He has a rich history of delivering on \$100M-\$4B Distribution and Transmission level overhead programs and underground programs across the USA. David holds programmatic and practical application expertise from defining scope, engineering the system, managing civil and electrical crews throughout the course of construction, and closing out programs to adopt system segments and new circuits into plant.

David's career spans across numerous roles within a major electric utility and as a senior consultant managing the design, engineering, and construction of critical infrastructure projects to improve the reliability of the grid. David has acted as a Consultant and Advisor to Utility Executive Leadership teams looking for internal process improvement direction and program validation.
