

Dominick Blue

Client Innovation Director

Key Focus: Technology

Dominick Blue brings over 15 years of operational and technical leadership experience in technology design, development, and adoption. Dominick leads the Technology Advisory practice, focused on delivering “Digital Resilience” to complex capital programs. He helps clients move beyond the noise of industry disruption to implement technologies that protect their people, assets, and schedules. His approach centers on meeting the client where they are and providing clarity to the second and third order effects of technology adoption on organization development and strategy to enable clients to achieve their vision and goals.

With over a decade of service in the U.S. Marine Corps and experience as a Technical Lead and Systems Reliability Engineer, he combines operational discipline with deep expertise in what it takes to build and adopt scalable, resilient systems. Dominick holds a Master of Business from the University of Southern California and has completed graduate level coursework and computing research in AI, Federated Machine Learning, and LEO Satellite Constellation network security and resilience, at the Georgia Institute of Technology. Additionally, Dominick is a Distinguished Fellow at the Energy, Policy, Research Foundation (EPRINC) where he focuses on AI, Data Centers, and Energy Security. Dominick brings the technical rigor and strategic clarity required to guide clients through technology adoption, and de-risked digital transformation with confidence.
